Special Drill Heads & Tiger Bores can easily cut into tough blockages such as tree roots, grease, heavy scale, or tuberculation and can be used to unblock pipes in order to make space for larger tools to follow.

They can also be attached in front of Picote Original Grinding Chains to create an initial opening in the blockage to then allow the chains to open and better perform their cleaning function.

They can also be used to create an initial CIPP connection opening in pipes when larger tools like the Twister cannot fit, or where a front drill head and front panel cannot be attached to a Smart Cutter™.

USES AND BENEFITS

There are 5 Models:

- **Tiger Bore** - highly efficient at reinstating lined connections and opening up blockages. It is also effective for cutting through collapsed liners to make room for larger removal tools to follow as well as for removing grout & concrete in small diameter pipes. The hardened Tiger carbides ensure maximum working efficiency, durability, and power - while the unique two-headed design allows it to be operated both by pushing & pulling.
- **Special Drill Head Cutter** - for use in cast iron pipes.
- **Special Drill Head Cutter 2.0** - features an open center that aids reinstatements in incompletely cured CIPP connections.
- **Special Drill Head PVC** - features a safety ring that allows use in PVC, clay and lined pipes with more reliability and less risk of damage.
- **Special Drill Head 3D** - can be pulled to the cutting location with the help of a steering wire. This can be especially useful in pipes with changing diameters that also have two access points.
